UAE HACKATHON 2026 · TRACK 2 PIONEERS · CHALLENGE #27

Three-minute pitch script وكالة

WAKALA — Autonomous AI. Accountable Actions. Format: 3-minute pitch followed by 2 minutes of questions.

Timing summary

Slide	Time window	Length	Spoken words
1 · Title	0:00 – 0:15	15 s	26
2 · The challenge	0:15 – 0:35	20 s	54
3 · How it works	0:35 – 1:05	30 s	72
4 · Live prototype	1:05 – 1:40	35 s	64
5 · Evidence	1:40 – 2:10	30 s	69
6 · Business model	2:10 – 2:30	20 s	38
7 · 90-day pilot	2:30 – 2:45	15 s	36
8 · Status and ask	2:45 – 3:00	15 s	32
Total		**3:00 max**	**391**

Fits the limit. 391 words ≈ 2:36 at a steady 150 words per minute, or ≈ 2:50 at a slower 138 wpm. That leaves 10–20 seconds of slack for slide changes and pauses. Rehearse with a stopwatch. If you run long, shorten slide 6 first.

The same text is stored in each slide's speaker notes in `WAKALA_Pitch_Deck.pptx`.

Script

Slide 1 — Title · 0:00–0:15

> Good morning. We are WAKALA — Arabic for “mandate”. Autonomous AI, accountable actions. We answer Challenge 27: securing the AI agents that will run government services.

Slide 2 — The challenge · 0:15–0:35

> The challenge describes half of government services moving to agentic AI within two years. Today an agent usually holds a broad role or a reusable credential. So when an agent is wrong or manipulated, nobody can prove who acted, what it was allowed to do — or stop it without stopping the whole service.

Source: the figure is from the Challenge #27 profile (Cyber Security Council). It is the organiser's framing, not our statistic.

Slide 3 — How it works · 0:35–1:05

> WAKALA puts an independent gateway between every agent and every protected service. Each agent signs every request. Each request is checked against a mandate bound to one citizen's case: tool, amount, recipient, expiry. When agents delegate, WAKALA issues a narrower signed child mandate — authority can never grow. Behaviour Watch flags misuse, officers intervene, and every decision is hash-chained. It is platform-neutral: the control sits at the service, not inside the model.

Slide 4 — Live prototype · 1:05–1:40

> This is the real prototype. Mariam asks to renew her residency permit. The delegated Insurance Agent tries to read another citizen's record. WAKALA blocks it before it runs — no data returned. Security Operations sees the same case: the violated rule, the verified chain, and only that one mandate suspended. An officer reassigns the task, and Mariam's renewal completes. An unrelated case never stopped.

Point at panels 1 → 2 → 3 as you speak.

Slide 5 — Evidence · 1:40–2:10

> We measured it. On 1,200 labelled synthetic requests, full WAKALA executed zero of 720 unauthorized operations and denied zero of 480 legitimate ones; a deliberately weak baseline executed 624. In the Attack Lab, seven of eight attacks succeed against the baseline, none against WAKALA. We also found and fixed a recovery flaw: 2 of 20 became 20 of 20, five times over. These are synthetic benchmarks, not government statistics.

Slide 6 — Business model · 2:10–2:30

> Our customers are entities deploying agents, the central digital-government and cyber authorities, and platform suppliers who must prove equivalent protection. We propose an annual entity licence tiered by services and agents, a supplier conformance kit, and integration services.

Slide 7 — 90-day pilot · 2:30–2:45

> The 90-day pilot starts in Shadow Mode on one low-risk service — observe only. Then we enforce one case type with officers in the loop, and finish with recovery drills and a go/no-go on measured results.

Slide 8 — Status and ask · 2:45–3:00

> This is a working prototype on synthetic data — not production, and no live model yet. We ask for one pilot entity and a sandbox. WAKALA: autonomous AI, accountable actions. Thank you.

Delivery notes

- **One speaker or two.** With two, switch at slide 4 (the demo) so the second speaker owns the prototype and evidence.
- **Say "synthetic" out loud** on slide 5. Judges will trust the numbers more, not less.
- **Do not demo live inside the 3 minutes.** The slide 4 screenshots are genuine captures. Keep the live prototype open in a second window for the Q&A (see `05_Demo_Runbook.md`).
- **If time is cut short**, skip slide 6 and say: "Business model and pilot plan are in our submission pack."
- Pronunciation: WAKALA = *wa-KAA-la* (وَكالة).
